

# Leapfrog Geo Hotkeys

For Leapfrog Geo Version 2024.1

Use the Tab and Shift+Tab keys to move between the different parts of the main window in the following order:

- Project tree
- Scene toolbar
- Scene window
- Shape list
- Shape properties panel

| Key(s)       | Action                                                                                                                          |
|--------------|---------------------------------------------------------------------------------------------------------------------------------|
| F8           | Maximise scene, minimise project tree and shape list. Press F8 again to restore.                                                |
| Ctrl+1       | Activate the <b>Select</b> tool (  )           |
| Ctrl+2       | Activate the <b>Draw slicer line</b> tool (  ) |
| Ctrl+3       | Activate the <b>Draw plane line</b> tool (  )  |
| Ctrl+4       | Activate the <b>Ruler</b> tool (  )          |
| Ctrl+\       | Split the scene view                                                                                                            |
| F10 or Alt L | Open the <b>Leapfrog Geo</b> menu                                                                                               |
| F11          | Open the <b>Seequent ID</b> menu                                                                                                |
| F1           | Open Leapfrog Geo help                                                                                                          |
| Ctrl+Q       | Quit Leapfrog Geo                                                                                                               |

## Project Tree

| Key(s)                | Action                                    |
|-----------------------|-------------------------------------------|
| Up and down arrows    | Navigate up and down the tree             |
| Right arrow           | Expand folder/object or go down one level |
| Left arrow            | Close folder/object or go up one level    |
| Ctrl+shift+left arrow | Close all folders/objects                 |

| Key(s)                      | Action                                                                      |
|-----------------------------|-----------------------------------------------------------------------------|
| Shift+right arrow           | Expand the selected folder/object and any objects in it                     |
| Shift+left arrow            | Close the selected folder/object and any objects in it                      |
| Ctrl+A and Ctrl+/<br>Ctrl+F | Selects all folders and objects<br>Search for objects                       |
| Enter                       | The equivalent of double-clicking on an object                              |
| Ctrl-X                      | Cut an object or subfolder. Use with Ctrl-V to move objects and subfolders. |
| Ctrl-V                      | Paste an object or subfolder                                                |

## Scene Window

| Key(s)           | Action                                               |
|------------------|------------------------------------------------------|
| Arrow keys       | Rotate the scene in 10 degree steps                  |
| Shift+Arrow keys | Rotate the scene in 2 degree steps                   |
| Home             | Reset the view, showing all visible objects in scene |
| U, D, E, W, N, S | Look Up, Down, East, West, North and South           |
| L                | Look at the slicing plane                            |
| Shift+L          | Look at the back of the slicing plane                |
| M                | Look at the moving plane                             |
| Shift+M          | Look at the back of the moving plane                 |
| Ctrl+M           | Look down the moving plane pitch                     |
| Shift+Ctrl+M     | Look up the moving plane pitch                       |
| P                | Select <b>Perspective</b> view                       |
| O                | Select <b>Orthographic</b> view                      |
| Ctrl+Delete      | Clear the scene                                      |

| Key(s)  | Action                                                                                                             |
|---------|--------------------------------------------------------------------------------------------------------------------|
| Ctrl+B  | Bookmark the viewing angle and zoom                                                                                |
| B       | Display the bookmarked viewing angle and zoom                                                                      |
| Ctrl+'  | Save the scene                                                                                                     |
| Ctrl+C  | Copies the scene to the clipboard. The image can then be pasted into another application, such as an image editor. |
| Ctrl+/' | Add the slicer to the scene. Press Ctrl+/' to remove the slicer from the scene.                                    |
| Ctrl+;  | Add the moving plane to the scene. Press Ctrl+; to remove the moving plane from the scene.                         |

## Scene Details Window

| Key(s)                             | Action                                       |
|------------------------------------|----------------------------------------------|
| Up and down arrows                 | Navigate up and down the object details list |
| Right arrow or Shift + Right arrow | Expand collapsed row                         |
| Left arrow or Shift + Left arrow   | Collapse expanded row                        |
| Ctrl+shift+right arrow             | Expand all collapsed rows                    |
| Ctrl+shift+left arrow              | Close all expanded rows                      |

## Slicer

| Key(s)  | Action                                                                          |
|---------|---------------------------------------------------------------------------------|
| Ctrl+/' | Add the slicer to the scene. Press Ctrl+/' to remove the slicer from the scene. |
| L       | Look at the slicing plane                                                       |
| Shift+L | Look at the back of the slicing plane                                           |
| T       | Thick slice (🍷)                                                                 |
| F       | Remove front (🗑️)                                                               |

| Key(s)                                   | Action                                                                                                               |
|------------------------------------------|----------------------------------------------------------------------------------------------------------------------|
| K                                        | Remove back (  )                    |
| Ctrl+V                                   | Orient the slicer to the current view                                                                                |
| Ctrl+E                                   | Slice the east (X) axis (  )        |
| Ctrl+N                                   | Slice the north (Y) axis (  )       |
| Ctrl+D                                   | Slice the elevation (Z) axis (  )   |
| Ctrl+L                                   | Lock the slicer to the camera (  )  |
| C                                        | Centre the slicer in the scene (  ) |
| Ctrl+right mouse button                  | Move the slicer forward and backward in the scene                                                                    |
| Ctrl+middle (or left+right) mouse button | Change the slice width                                                                                               |
| , (comma)                                | Step the slicer forward                                                                                              |
| . (full stop)                            | Step the slicer backward                                                                                             |

## Moving Plane

| Key(s)       | Action                                                                                     |
|--------------|--------------------------------------------------------------------------------------------|
| Ctrl+;       | Add the moving plane to the scene. Press Ctrl+; to remove the moving plane from the scene. |
| M            | Look at the moving plane                                                                   |
| Shift+M      | Look at the back of the moving plane                                                       |
| Ctrl+M       | Look down the moving plane pitch                                                           |
| Shift+Ctrl+M | Look up the moving plane pitch                                                             |

## Processing Queue

| Key(s) | Action                                                     |
|--------|------------------------------------------------------------|
| Alt+P  | View the processing queue. Press Alt+P to close the queue. |
| Ctrl+P | Pause task processing                                      |

## Project Tab

| Key(s) | Action                          |
|--------|---------------------------------|
| F4     | Choose the <b>Search</b> folder |
| F5     | Refresh the list of projects    |

## In-Scene Editors

| Key(s) | Action                                                                                                                                                                     |
|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Shift  | Hold down the Shift key to switch to the <b>Select</b> tool (  ) and rotate the scene |
| Ctrl+S | Save edits                                                                                                                                                                 |
| Ctrl+Z | Undo edit                                                                                                                                                                  |
| Ctrl+Y | Redo edit                                                                                                                                                                  |
| Ctrl+W | Close editor                                                                                                                                                               |
| Delete | Delete the selected segment, disk or node                                                                                                                                  |

## Drawing

Use the following keyboard shortcuts while drawing:

| Key(s) | Action                                                                                                    |
|--------|-----------------------------------------------------------------------------------------------------------|
| Ctrl+5 | Draw lines (  )        |
| Ctrl+6 | Draw points/disks (  ) |
| Ctrl+S | Save (  )              |

| Key(s)  | Action                                                 |
|---------|--------------------------------------------------------|
| Ctrl+W  | Close editor (✕)                                       |
| Ctrl+Z  | Undo (↶)                                               |
| Ctrl+Y  | Redo (↷)                                               |
| Delete  | Delete the selected segment, node, tangent or disk (🗑) |
| X       | Draw/move on slicer (🌀)                                |
| Shift+X | Draw/move on objects (🌀)                               |
| Q       | Make segments curved (↷)                               |
| Shift+Q | Make segments straight (↶)                             |
| Shift+A | Add node (📍)                                           |
| A       | Add/reorient tangent (📍)                               |
| R       | Remove selected tangent(s) (📍)                         |
| V       | Flip tangent/disks (🔄)                                 |
| Shift+D | Add/remove disk (📍)                                    |
| Shift+E | Make selected line 3D (📍)                              |
| Shift+W | Set slicer to selected 2D line (📍)                     |
| Shift+S | Simplify the line by reducing the number of nodes (📍)  |
| Alt+S   | Toggle snapping                                        |
| Alt+N   | Snap to polyline nodes (📍)                             |
| Alt+E   | Snap to mesh edges (📍)                                 |
| Alt+V   | Snap to mesh vertices (📍)                              |
| Ctrl+A  | Select all                                             |

| Key(s)           | Action                          |
|------------------|---------------------------------|
| Shift+Ctrl+Alt+L | Select all lines                |
| Shift+Ctrl+Alt+T | Select all tangents             |
| Shift+Ctrl+Alt+P | Select all points without disks |
| Shift+Ctrl+Alt+D | Select all points with disks    |

## Interval Selection/Split Lithologies

| Key(s)       | Action                                                                                                                                                                    |
|--------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Ctrl+5       | Select intervals with a stroke (  )                                                      |
| Ctrl         | Hold down the Ctrl key while clicking intervals to remove them from the selection (  ) |
| Ctrl+G       | Select individual intervals (  )                                                         |
| Ctrl+A       | Select all visible segments (  )                                                       |
| Ctrl+Shift+A | Clear the current selection (  )                                                       |
| Ctrl+I       | Invert the current selection (  )                                                      |
