

Leapfrog Geo Surface Types

For Leapfrog Geo Version 2025.1

Core Contact Surface Types

Deposit and Erosion Surfaces

One set of contact points – above **OR** below the unit of interest

Only **ONE** contact point per unit per drillhole

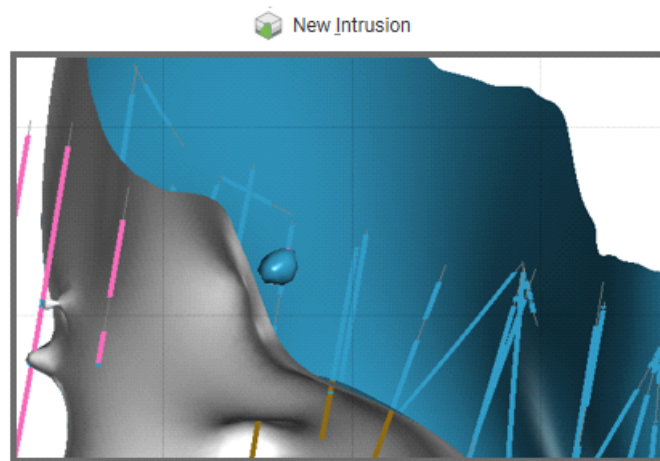

Deposit surface volumes **cannot** cut into an underlying older unit

Erosion surface volumes **can** cut into an underlying older unit

Intrusion Surfaces

One set of contact points – above **AND** below the unit of interest

Can have **MULTIPLE** contact points per unit per drillhole

Intrusion volumes **enclose** the unit of interest

Vein Surfaces

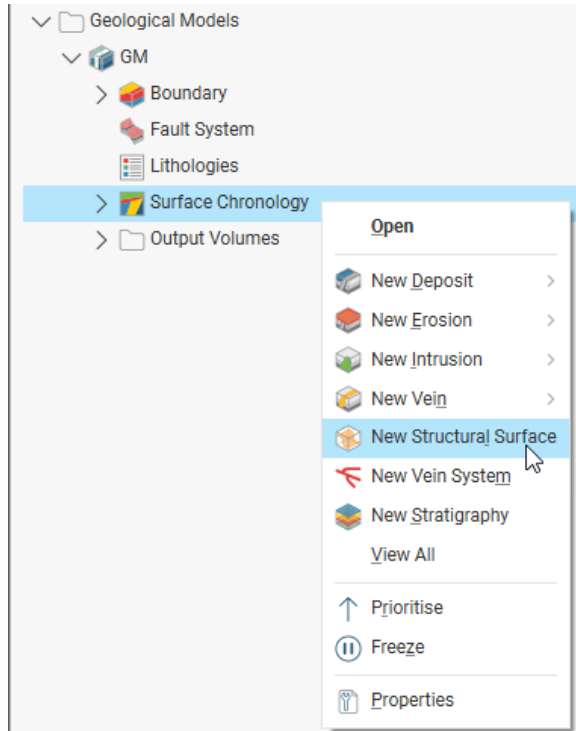

Two sets of contact points – above **AND** below the unit of interest

Creates a Hanging wall (HW) set **AND** Footwall (FW) set of contact points

Specific Function Surfaces

Structural Surfaces

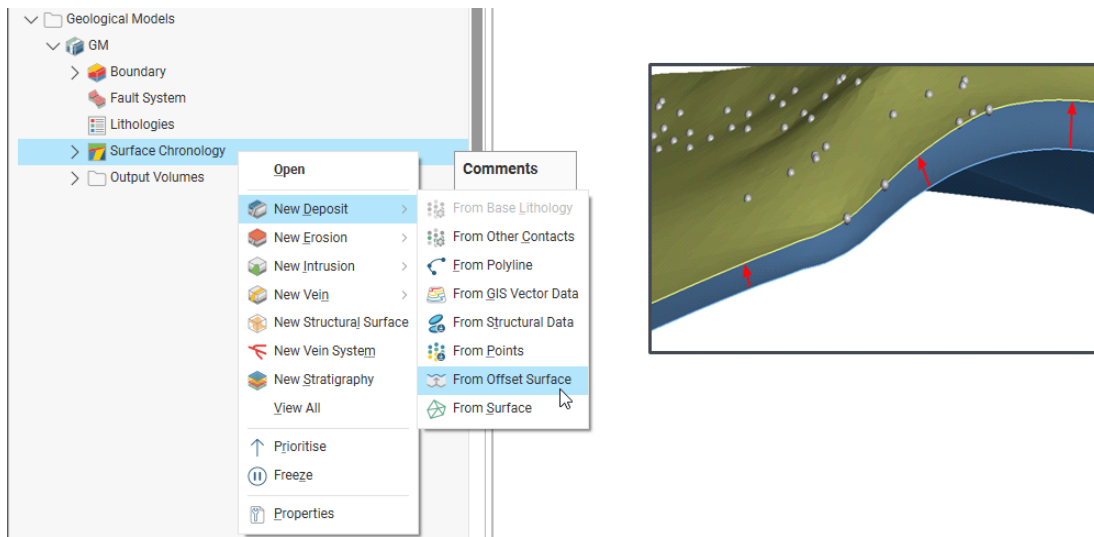

Incorporates **non-contact** structural data with on-contact data (drilling data, surface mapping)

Can be used for a **Deposit**, **Erosion** or **Intrusion** contact type

Offset Surfaces

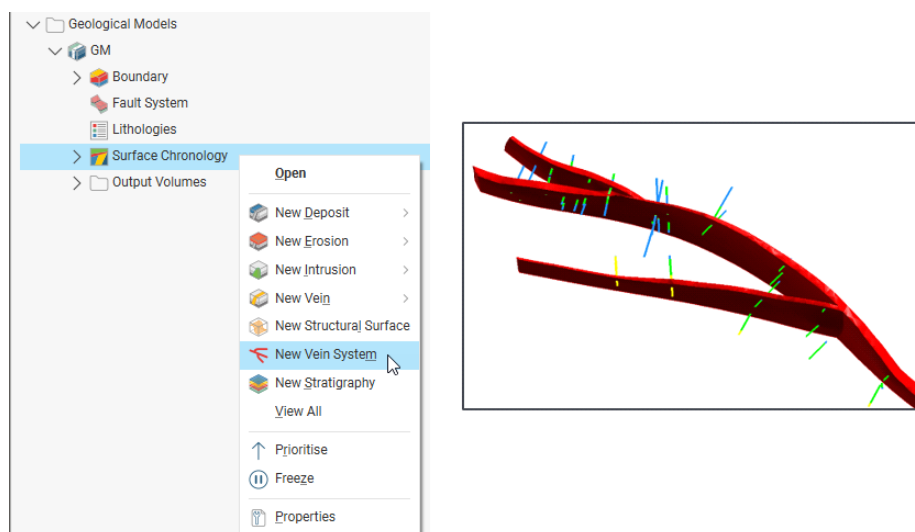

Maintains **consistent offset** while **honouring** contact points – for stratigraphy with common deformation

Can be used for a **Deposit** or **Erosion** contact type

Vein System Surfaces

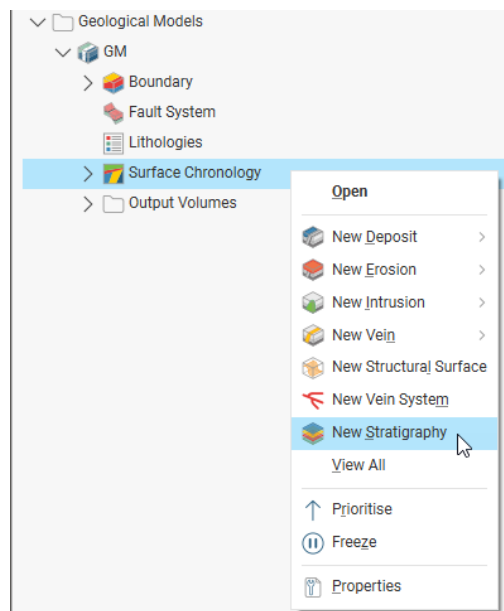

Combines individual veins into a **single interconnected system** of veins

Can be used for a **Vein** contact type

Stratigraphic Sequences

Generates **multiple** surfaces in a stratigraphic sequence in a **single pass**

Can be used for a **Deposit** or **Erosion** contact type
